

NGUYEN PHUOC THANH

Artificial Intelligence Engineer

ABOUT ME

I am a dedicated AI major with a passion for mathematics and algorithms. Known for my friendly demeanor, I thrive in team settings and am eager to apply my skills in competitive programming to tackle real-world challenges.

ACHIEVEMENTS

- Vietnam Olympic AI 2025 (First Round): Gold Medal - Top 4 Southern Vietnam, Top 6 Vietnam.
- Vietnam Olympic AI 2025 (Final Round): Bronze Medal - Top 23 Vietnam.
- ISDS 2023 Conference (Q4): First Author of a research paper on optimizing real-time sign-language recognition with MediaPipe.
- ICPC Southern Vietnam Contest 2024: Silver Medal, demonstrating strong algorithmic and teamwork performance.
- ICPC Vietnam National Contest 2025: Bronze Medal, showcasing consistent high-level competitive programming capability.
- ICPC Asia Regional 2025: Honorable Mention, competing among top teams across Asia.
- VNOI Cup 2025: Ranked Top 35 nationwide in the Vietnam Olympiad in Informatics.
- FPT University Olympiad Selection Exam 2024: 2nd/200+, selected for the university's official competitive programming team.
- Constructor Cup (Constructor University, Germany): Ranked Top 29 worldwide and Top 1 in Vietnam.
- Meta Hacker Cup - Human Track: Ranked 927th out of 5,972 participants globally.

EDUCATION

FPT University

Bachelor of Artificial Intelligence

GPA 3.5/4.0

English B2

EXPERIENCES

AI Engineer in FPT Software

Onsite | FPT Software AI center | 9/2023 - 7/2025

- Built SOTA facial recognition for challenging environments, following NIST-style evaluation; used 3D face reconstruction and multi-angle augmentation, deployed via ONNX/TensorRT on edge devices.
- Developed action-recognition models (3D CNN, ViT, CLIP, TDS-CLIP, Side4Video) and deployed them across 1,000+ surveillance cameras.

Tech stack: TensorFlow, PyTorch, ONNX, TensorRT, YOLO, 3D CNN, ViT, CLIP, MongoDB, Flask, Docker, Unity, Jetson Nano, Raspberry Pi.

AI Engineer in Rizlum

Remote | France-based company | 07/2025 - Present

Working as a remote AI Engineer (3+ years experience role) on multi-agent systems for insurance automation.

- Built OCR pipelines for French ID cards and insurance documents using Docling, PaddleOCR and custom vision models.
- Designed RAG and Graph RAG systems with LangChain, LightRAG, Qdrant, MongoDB and Neo4j for retrieval over large insurance knowledge bases.
- Developed voice-enabled chatbots using Whisper and Qwen, supporting multilingual, insurance-specific conversations.
- Used diffusion models for data augmentation and LoRA fine-tuning on Qwen to improve understanding of domain-specific documents.
- Benchmarked RAG pipelines using RAGAS (faithfulness/answer relevance/context precision & recall) to evaluate and continuously improve retrieval quality over insurance knowledge bases.

Tech stack: PyTorch, Qwen, LoRA, Stable Diffusion, LangChain, LightRAG, Docling, Qdrant, Neo4j, PaddleOCR, Whisper, Docker, FastAPI.

TECHNICAL SKILLS

- Deep Learning & ML: TensorFlow, PyTorch, ONNX, Scikit-learn; Computer Vision, Reinforcement Learning, Transformers (ViT, YOLO, 3D CNN).
- Generative & Multimodal AI: Stable Diffusion, CLIP, Qwen VLMs; LoRA fine-tuning for image-text and document-understanding tasks.
- RAG & Data Systems: RAG and Graph RAG with LangChain; MongoDB, Qdrant, FAISS, Neo4j, Ragas.
- Backend & Deployment: Python, C/C++; Flask, FastAPI, Docker, CMake; edge deployment on Jetson Nano and Raspberry Pi; AWS (cloud services).
- Databases & Collaboration: MySQL, SQL Server, MongoDB; Git (GitLab, Gitea); Jira, Confluence; writing and maintaining technical documentation.
